Yacht Carbon Offset News Release

9 September 2013

Standard pricing, September 2013

Clients are often pleasantly surprised by how little it costs to counteract the carbon footprint of their yachting. As we begin the “show season”, owners, captains & managers are considering future improvements to yacht operations, so Yacht Carbon Offset would like to announce our improved standard pricing*:

- €24 per 1,000 litres Marine GasOil (2.4 eurocents per litre), plus
- €50 per transaction, or €5 per 1,000 litres if smaller.

Mark Robinson of Yacht Carbon Offset said: *“For a superyacht owner or charter client wishing to eliminate their net greenhouse gas emissions, the extra 2.4 to 2.9 eurocents per litre of fuel should not be an obstacle. The “pay-as-you-go” carbon offset service can be for a single itinerary or a standard procedure for all fuel. Either way, your decision to carbon offset provides vital support to real emission reduction projects whilst preserving your cruising freedom.”*

Yacht Carbon Offset provides a fully-documented service for those that own and enjoy the world’s leading superyachts and has Lloyds Register Quality Assurance Certification. For details and to take action to balance your yacht’s greenhouse gas emissions, visit www.yachtcarbonoffset.com

* Please see notes on following page. Prices vary slightly for other fuel types, and we can also carbon offset your shore power or aircraft use. VAT may be due depending on your circumstances. Please ask us for a no-obligation quote.

Yacht Carbon Offset

Notes:

Pricing indicated in this news release is correct at 9 September 2013 but is subject to change – for up to date pricing please request a quotation.

We can invoice in USD or GBP if you prefer, and we accept payment by bank transfer or by card payment, whichever is most convenient for you.

Pricing for other fuels (e.g. Gasoline, Automotive GasOil...) is slightly different since the quantity of greenhouse gas per litre of fuel depends on the fuel type & density.

Yacht Carbon Offset is pleased to respond to clients' specific preferences for the type or location of greenhouse gas reduction projects assigned for their carbon offset service, but pricing may then be different from our standard pricing.

Yacht Carbon Offset

Yacht Carbon Offset provides a clear, auditable way to counteract the carbon footprint of a yacht's engines and generators. Tonne for tonne, the vessel's emissions are offset by equivalent greenhouse gas reductions from projects such as renewable power. Each project depends on the carbon funding, and Yacht Carbon Offset has Lloyds Register Quality Assurance Certification, so Clients know that their action makes a real impact on net emissions.

The "pay as you go" service is calculated from the fuel quantities specified, whether a single passage or for the whole season's cruising. There's no onboard equipment and there is no long term obligation for the owner.

Carbon Offsetting is of potential interest to owners or charterers wishing to take practical steps to minimise environmental impact, and also may be welcomed by prominent individuals or businesses that carefully position their "brand". It is particularly relevant when cruising in environmentally sensitive areas.
